

User Story Requirements

HR Attrition Analytics Dashboard (Power BI)

Document control	
Project	HR Attrition Analytics Dashboard
Version / status	1.0 – Draft
Date	21 September 2026
Prepared by	Ntiyiso Ndhlovu, Business Analyst
Related documents	Business Requirements Document (BR-01 to BR-10); Data Analytics Life Cycle

1. Purpose and how to use this document

This document translates the business requirements into user stories that describe what each user needs from the dashboard and how each need will be tested. It contains 15 stories in five epics. Every story links to a business requirement in the BRD and has testable acceptance criteria.

Stories use the format: As a [persona], I want [capability], so that [benefit]. Priority follows MoSCoW: Must, Should, Could. The data is synthetic (IBM HR Employee Attrition dataset, 1,470 employees, 16.1% attrition), so the figures quoted in the acceptance criteria are checks against that dataset.

2. Personas

Persona	Needs from the dashboard
Head of People (sponsor)	The overall attrition picture, priorities, and recommendations for leadership.
HR Business Partner	Department- and role-level detail to advise managers.
Compensation and Benefits	How pay, stock options, and rewards relate to attrition.
Line manager	Team-level risk factors such as workload and travel.
Privacy-conscious HR lead	Assurance that individuals cannot be identified from small groups.
Report user (any)	Numbers that are consistent, reconciled, and clearly defined.

3. Story summary

ID	Story	Persona	Priority	BRD reference	Delivered on
US-01	Headline KPIs	Head of People	Must	BR-01	Page 1
US-02	Attrition by department and role	HR Business Partner	Must	BR-02	Page 1
US-03	Age and tenure patterns	Head of People	Must	BR-02	Page 1
US-04	Comparison with the baseline	HR Business Partner	Must	BR-03	Pages 1–2
US-05	Pay and stock options	Compensation and Benefits	Must	BR-04	Page 2
US-06	Workload and travel	Line manager	Must	BR-04	Page 2
US-07	Satisfaction by role	HR Business Partner	Must	BR-04	Page 2
US-08	Exploring combined factors	Head of People	Should	BR-04	Page 2
US-09	High-risk segments	Head of People	Should	BR-05	Page 3
US-10	High performers	Head of People	Should	BR-06	Page 3
US-11	Overtime impact estimate	Head of People	Should	BR-07	Page 3
US-12	Findings and recommendations	Head of People	Must	BR-08	Page 3 and README
US-13	Consistent, reconciled numbers	Report user	Must	BR-01, acceptance criteria	All pages
US-14	Small-group protection	Privacy-conscious HR lead	Should	Non-functional (privacy)	All pages
US-15	Attrition risk score	HR Business Partner	Could	BR-09	Future release

Priority split: 9 Must, 5 Should, 1 Could.

4. User stories

Epic 1: Workforce overview (Page 1)

US-01: Headline KPIs

Story	As the Head of People, I want to see headcount, leavers, attrition rate, average tenure, and average income at a glance, so that I know the size of the problem.
Priority / reference	Must BR-01 Page 1
Acceptance criteria	- On load, the cards show headcount 1,470, leavers 237, and attrition rate 16.1%. - Filtering by department, gender, or job level updates every card.

US-02: Attrition by department and role

Story	As an HR Business Partner, I want to see attrition by department and job role, showing both rate and volume, so that I focus on the right teams.
Priority / reference	Must BR-02 Page 1
Acceptance criteria	- Charts show attrition rate, with headcount and leavers in the tooltip. - Roles are sorted by rate, so Sales Representatives (about 40%) and Laboratory Technicians (about 24%) are easy to find.

US-03: Age and tenure patterns

Story	As the Head of People, I want to see attrition by age group and tenure band, so that I can tell whether we lose people early in their careers or their time with us.
Priority / reference	Must BR-02 Page 1
Acceptance criteria	- Age and tenure charts are visible on Page 1. - The first-year tenure band is shown separately from later bands.

US-04: Comparison with the baseline

Story	As an HR Business Partner, I want every attrition rate compared with the overall rate, so that I can tell which groups are truly above or below average.
Priority / reference	Must BR-03 Pages 1–2
Acceptance criteria	- Rate charts include the overall attrition rate as a reference line. - Tooltips show the difference from the overall rate in percentage points.

Epic 2: Attrition drivers (Page 2)**US-05: Pay and stock options**

Story	As a member of Compensation and Benefits, I want to see attrition by income band and stock option level, so that I can judge whether pay and equity affect retention.
Priority / reference	Must BR-04 Page 2
Acceptance criteria	- Both breakdowns show rate and group size. - Group size is visible for every band so small groups can be judged (stock option level 3 has only 85 employees).

US-06: Workload and travel

Story	As a line manager, I want to see attrition for overtime vs non-overtime staff and by travel frequency, so that I understand how workload affects my team.
Priority / reference	Must BR-04 Page 2
Acceptance criteria	- Overtime shows about 30.5% attrition against 10.4% without overtime. - Business travel is shown in the same format, with group sizes.

US-07: Satisfaction by role

Story	As an HR Business Partner, I want a job role by job satisfaction heatmap of attrition rate, so that I can spot dissatisfied groups quickly.
Priority / reference	Must BR-04 Page 2
Acceptance criteria	- Cells are colour-graded with a legend. - Values are printed in the cells so meaning does not rely on colour alone.

US-08: Exploring combined factors

Story	As the Head of People, I want to break attrition down step by step across several factors, so that I can see which combinations matter most.
Priority / reference	Should BR-04 Page 2
Acceptance criteria	A decomposition tree splits Attrition Rate by overtime, job level, tenure, and other user-selected fields.

Epic 3: Talent and risk (Page 3)**US-09: High-risk segments**

Story	As the Head of People, I want a ranked list of high-risk employee segments, so that I can target retention actions.
Priority / reference	Should BR-05 Page 3
Acceptance criteria	- Each segment shows headcount, leavers, and attrition rate (for example, overtime plus bottom-quartile income, about 58.5%). - Segments with fewer than 10 employees are flagged as low confidence.

US-10: High performers

Story	As the Head of People, I want to see attrition by performance rating and job involvement, so that I know whether we are losing our best people.
Priority / reference	Should BR-06 Page 3
Acceptance criteria	- Both breakdowns show rate and number of leavers. - Rating 4 employees (about 16.4%) can be compared directly with rating 3 (about 16.1%).

US-11: Overtime impact estimate

Story	As the Head of People, I want an estimate of the leavers avoided if overtime attrition matched the baseline, so that I can size the opportunity.
Priority / reference	Should BR-07 Page 3
Acceptance criteria	- A card shows roughly 84 leavers avoided, with the overall rate falling from 16.1% to about 10.4%. - It is labelled as an illustration, not a forecast, and the calculation is explained.

Epic 4: Insight and data trust**US-12: Findings and recommendations**

Story	As the Head of People, I want plain-language findings and recommendations alongside the charts, so that I can act without interpreting the charts myself.
Priority / reference	Must BR-08 Page 3 and README
Acceptance criteria	- Three to five findings and matching recommendations appear on Page 3 and in the README. - Limitations (synthetic data, associations only, small groups) are stated.

US-13: Consistent, reconciled numbers

Story	As a report user, I want KPIs defined once and matching the source data, so that I can trust the numbers.
Priority / reference	Must BR-01, acceptance criteria All pages
Acceptance criteria	- All visuals use explicit measures from a single measures table. - Totals reconcile to the source (1,470 / 237 / 16.1%), and KPI definitions are documented.

US-14: Small-group protection

Story	As a privacy-conscious HR lead, I want small groups flagged or suppressed, so that individuals cannot be identified from a breakdown.
Priority / reference	Should Non-functional (privacy) All pages
Acceptance criteria	Groups with fewer than 10 employees are flagged in visuals and tooltips.

Epic 5: Future release**US-15: Attrition risk score**

Story	As an HR Business Partner, I want each employee scored for attrition risk, so that I can prioritise conversations.
Priority / reference	Could BR-09 Future release
Acceptance criteria	- A model outputs a risk score with documented accuracy and limitations. - Deferred to a future release.

5. Traceability to the BRD

BRD ref	Requirement (short)	User stories
BR-01	Headline KPIs with filters	US-01, US-13
BR-02	Attrition by department, role, age, and tenure	US-02, US-03
BR-03	Comparison with the overall rate	US-04
BR-04	Driver analysis	US-05, US-06, US-07, US-08
BR-05	High-risk segments	US-09
BR-06	High performers and involvement	US-10
BR-07	Leavers avoided scenario	US-11
BR-08	Findings and recommendations	US-12
BR-09	Predictive risk scoring (Could)	US-15
BR-10	Trends over time (Won't, no date field)	None
Non-functional	Privacy and small-group protection	US-14

6. Definitions of ready and done

6.1 Definition of ready

- The story has a persona, a benefit, and a linked BRD requirement.
- Acceptance criteria are specific and testable against the dataset.
- Any fields needed exist in the data model.

6.2 Definition of done

- The visual is built using explicit measures from the measures table.
- Every rate shown includes group size (n) on the chart or in the tooltip.
- Slicers cross-filter the visual correctly.
- The story's acceptance criteria pass and totals reconcile to the source data.
- Colour is not the only way meaning is conveyed.
